Experience

Sony Logistics | *Node.js, Next.js, tRPC, PostgreSQL, Docker, GitHub Actions* Remote

Full Stack Developer *Sept 2026 - Present*

- Delivered an internal fleet management platform which is being used by **7 vendors** to manage **30+ trucks**.
- **Replaced** Excel and paper-based expense, billing and salary workflows into a **unified platform**.
- Built the company website, leading **e-commerce enquiries** across states and **15+** vehicle partnership requests.

Technical Contributions

- Developed **210+ type-safe tRPC endpoints** powering **4 role-based portals** for company management, vendors, drivers, and platform administrators.
- Implemented **Playwright-based PDF bill generation**, **AI-assisted form autofill**, fuel card management, and staff management for company and vendor teams with **fine-grained access controls**.
- Built a **CI/CD pipeline** to test the application, publish Docker images to GHCR, and deploy to staging before releasing to production, with **Better Stack logging** and **heartbeat monitoring** for operational visibility.

Projects

Calrix - Email & Calendar on Autopilot | *Next.js, Corsair, AI SDK, Inngest* **Github | Live**

- Built automation platform that triages Gmail and Google Calendar through a **7-step LLM pipeline** classifying email threads and meetings according to the user behaviour.
- Designed an **adaptive memory** layer powered by **9** preference signals, relationships, and self-building contact book giving the agent persistent context across sessions.
- Cut agent latency **4x (∼60s → ∼15s)** and **token cost ∼60%** via prompt caching on the static prompt prefix, a cached per-tenant tool set, and direct read-only tools that eliminates unnecessary MCP call.

Ship0 - AI App Builder | *Express, Next.js, E2B, Inngest, PostgreSQL, TanStack Query* **Github | Live**

- Built an AI-powered platform that generates **Next.js applications** from natural language prompts using **E2B sandboxed execution** and Inngest for background job orchestration.
- Designed a resilient backend with **per-job retries**, **timeouts**, **error handling**, and database-enforced **credit-based rate limiting** for AI workflows.
- Optimized system performance by reducing API payload sizes **(∼1MB → ∼150–400KB)**, improving frontend polling efficiency, and adding CI/CD pipelines for automatic backend deployment to a VPS.

Technical Skills

Languages: TypeScript, JavaScript, Golang, C++

Frontend: React, Next.js, TanStack Query, Zustand

Backend: Node.js, WebSockets, Inngest, tRPC, Turborepo

Databases & ORM: PostgreSQL, Prisma, Drizzle, Redis

Cloud & Devops: Docker, Docker Compose, AWS, VPS, CI/CD

Education

Chandigarh University Chandigarh, India

Masters in Computer Applications *Aug 2026 - Present*

Chandigarh University Chandigarh, India

Bachelors in Computer Applications; CGPA: 7.5 *Aug 2023 - July 2026*
